Experience

Electrical Engineering Internship @ Temple CST Philadelphia, PA
June 2026 - August 2026

- Engineered a multi-label machine learning pipeline in Python to localize cardiac abnormalities within the TNMG database (8M+ ECG scans).
- Transformed 1D time-series ECG waveforms into 1024x1024 2D plots, leveraging a ResNet-18 architecture for image classification and a post-processing algorithm for precise anomaly localization.
- Addressed severe dataset imbalances (where <2% of scans contained multiple abnormalities) by implementing class-balancing strategies to improve model reliability.
- Evaluated model performance using the NEDC framework, specifically analyzing segmentation-quality overlap (OVLP) metrics to measure predicted event alignment.
- Utilized Temple's remote GPU nodes via MobaXterm and Visual Studio Code to train models and optimize neural network complexity.
- Collaborated with a three-person research team to improve upon a Multi-Label ECG classification system capable of identifying overlapping cardiac anomalies.

Temple CST STEM-UP Program Philadelphia, PA
Participant *October 2026 - Present*

- Developing a computer science project for the George Washington Carver Science Fair at Temple.
- Participated in hands-on STEM activities exploring scientific concepts, computational thinking, and real-world applications.
- Apply analytical reasoning and problem-solving skills through collaborative, project-based learning.
- Explore interdisciplinary fields in science, technology, engineering, and mathematics while developing technical skills.

Drexel University CCI Camp Philadelphia, PA
Participant *July 2025*

- Built a final video game project for the Meta Quest 3S VR Headset.
- Completed coding projects that strengthened programming and problem-solving skills.
- Worked in small teams to design, test, prototype, and present technology solutions under deadlines.
- Took responsibility for group tasks, helping the team stay organized and finish on time.

Penn Engineering Steppingstone Blended Learning Initiative (BLI) Philadelphia, PA
Participant *October 2025 - May 2026*

- Participated in a College-level STEM program emphasizing computer science, engineering thinking, and problem-solving.
- Currently completing coursework in Java programming to prepare for the AP CSA exam.
- Strengthening skills in algorithms, data structures, and computational reasoning.
- Engaging in a blended learning model combining virtual instruction, independent study, and project-based learning.

Awards & Honors

1st Place @ Coded By Beta Innovation Tournament	2026
2nd Place @ Media & Design Regional Philadelphia High School Competition	2026
1st Place @ Drexel University's Philly Codefest High School Edition	2026
1st Place & Hall of Fame @ Young Coder Sphere's "Code for Wellness" Competition	2025
Auerbach Cybersecurity Camp Scholarship from Drexel University College of Computing & Informatics	2025

Education

Academy at Palumbo, Philadelphia, PA *Expected June 2028*
Involved in Coding, Environmental Action, and Robotics

- GPA: 4.0 (unweighted)
- Honor Roll
- Co-President of Environmental Action Club
- Lead Programmer of FTC Team 8730 “RoboGriffins”

Skills

- Languages: Javascript, CSS, Java, Python, C++
- Libraries/Frameworks: TailwindCSS, GSAP, Locomotive Scroll, Motion(Framer Motion), NextJS, React Native, Matter.js
- Technologies: Expo Go, Git, Github, Figma, Supabase, Affinity
- Spoken Languages: English (Fluent), Chinese (Basic)
